

Get Advice on CPT® 2019 Updates From the TCI Experts â€” Available Now!

2018-10-24

To apply code changes correctly, a simple list of what's new won't do. You need information about the big picture to really get to work. That's why we provide analysis of 2019 additions, revisions, and deletions, and it's available now for subscribers of our TCI SuperCoder online coding packages.

To reach the advice from our TCI team:

- log in to your account that includes code search
- make sure you're on your Coding Tools or Coder page
- on the left-side menu, select /2019 Code Changes.

And there you are! The analysis offers insights into how your coding will change and related code changes you should check out, too.

Bonus tip: Advice is available on code details pages for 2018 codes that will see revisions or deletions in 2019. For instance if you go to the code details page for 99446, you'll see a 2019 Advice box alerting you to the addition of EHR to that code descriptor in 2019. By seeing advice on the pages of the codes you use every day, you can learn your top 2019 updates while you work!
