

New Code Constructor Now Part of TCI SuperCoder Online Coding Solutions

2017-06-14

Getting to the correct code one character at a time just got a little easier! TCI SuperCoder has added Code Constructor as a new feature included in our popular Code Search, Fast Coder, and Physician Coder online subscriptions.

Here's how it works: Logged in subscribers click "Code Constructor" in the menu on the left side of the Coding Tools page. Once the Code Constructor page opens, you choose a code set: CPT®, HCPCS, or ICD-10-CM. A pick list showing the code set's code ranges will appear. Click the range that's right for your case. A pick list with narrower options will then appear. Keep clicking until you've got your code. It's that simple!

You can see your code grow character-by-character until the code is complete. Code Constructor will then move the code to your list of built codes. Check MPFS data for CPT® and HCPCS codes in the list, or click a code to go to its details page. If CCI Edits Checker is part of your subscription, use the orange CCI Check button to open the CCI tool with your built codes already in place. You know TCI SuperCoder solutions love links to make it easy to navigate from tool to tool!
