

# Quickly Spot CPT® Guideline Changes by Looking for Green SuperCoder Text

January 8, 2013

If you cross 2013 updates off your to-do list without checking for any guidelines changes, your 2013 coding could be noncompliant. Meeting a code's requirements also requires meeting any definitions, documentation specifications, and/or rules listed in the code's section or subsection guidelines.

For 2013, you have almost 150 CPT® guidelines changes to learn. Fortunately, with SuperCoder's Code Search, you can quickly spot a code's changed guidelines. Just like in the past, new and/or revised guidelines text is highlighted in green. And when combined with a Coding Alert online newsletter, you get all the confusing language in plain English and real-world coding scenarios.

## **How a Physician Coder works:**

On a code's page, scroll down to the left hand side to CPT® Guidelines to check for any changes. Read any article published in your specialty Coding Alert (complete articles are added regularly included with each Physician Coder purchase).
