

Start Searching ICD-10 2017 on October 1 With SuperCoder

2016-09-28

October 1 always brings lots of coding updates to the SuperCoder site. This year, along with the usual quarterly updates to CCI edits, Medicare fees, HCPCS codes, and more, you'll also see the switch to ICD-10 2017!

This is the first update since the new code set was implemented a year ago, but this update is not small. SuperCoder has been working to ensure you'll be able to search the thousands of new 2017 codes for ICD-10-CM and ICD-10-PCS when they go into effect on October 1.

Smart move: To be sure you're up to date on the changes that will impact your specialty most, check out the articles in The Coding Institute newsletters on SuperCoder, available individually or as part of Physician Coder and Facility Coder subscriptions.
