

# Use Usage Report for Performance Reviews

October 12, 2012

The administrator of a corporate/group user account can check how often staff are logging into SuperCoder by going to My Account, Create Users. Click on Subuser Usage Report for an itemized list by member of log in time and length.

Many SuperCoder customers review this report during coder's performance reviews. An employee with a low coding accuracy rate and low SuperCoder reference usage can be coached to spend more time looking up information to improve his or her score. Alternatively, employees with high usage and high accuracy can be rewarded for their dedication.
