DESCRIPTION

Regional nerve blocks are a form of pain management lasting 10 to 12 hours depending on the technique. A regional nerve block is placed preoperatively or postoperatively for postoperative pain control to decrease the need for narcotics and patient-controlled analgesia (PCA) machines.

POLICY

A. A regional nerve block will be allowed preoperatively for pain control along with general anesthesia for the following:
   1. Shoulder surgeries (arthroscopic or otherwise) that involve cutting or drilling of the bone including placement of suture anchors.
   2. Knee surgeries – ACL (anterior cruciate ligament), Fulkerson, High Tibial Osteotomy, and Total knee replacement, repair, or revision
B. A regional nerve block will **not** be allowed preoperatively for pain control along with general anesthesia for the following:
   1. Diagnostic arthroscopic shoulder surgery that does not involve cutting or drilling of the bone or placement of suture anchors
   2. Knee surgeries not listed above
   3. All other surgeries not listed

C. A regional nerve block will be allowed postoperatively for pain control following general anesthesia for any condition.

D. A regional nerve block would be appropriate for both inpatient and outpatient settings.

**DOCUMENTATION**
The medical record must indicate when the regional nerve block was done.

**CODING**
The following codes for treatment and procedures applicable to this policy are included below for informational purposes. Inclusion or exclusion of a procedure, diagnosis or device code(s) does not constitute or imply member coverage or provider reimbursement. Please refer to the member’s contract benefits in effect at the time of service to determine coverage or non-coverage of these services as it applies to an individual member.
